. In this case, ThinApp creates a single Windows session of the desktop from a VMWare View installation. With ThinApp, you can deliver a hosted application to as many as 10,000 users, without making any changes to your existing desktop or server infrastructure. For a detailed comparison of ThinApp and an alternative, read this PDF: Shopping Cart My Account Spicy Chicken Rolls Spicy chicken rolls! This is a recipe that my mother used to make when I was little. I grew up on this recipe and this is one of my favourite comfort foods. I have recreated the flavours to a modern palate. Printable Recipe Preheat oven to 190°C. In a medium bowl, mix together the egg, mustard, salt and pepper. Mix together the breadcrumbs and sesame seeds. Dip the chicken in the egg, then in the breadcrumbs. Cook the chicken on a hot grill for 8-10 minutes or until golden brown. Place the chicken rolls on a baking sheet. Top with slices of pickled cucumber and slice of crisp lettuce. Scatter with spring onion and serve. It has something to do with the way numpy.hstack works. Here is a minimal example which shows the issue. Why can't I take a numpy array and map it with a function? import numpy as np a = np.array([[0,1],[2,3]]) b = map(np.array, [[1,2],[3,4]], function(a) return [2*a[1],a[0]]) print b Output: [array([2, 2], [6, 6]), array([12, 2], [6, 6])] I have already checked other questions with a similar theme: 82157476af
